About This Content

The heavy freight second generation Class 56 diesel locomotive comes to Train Simulator in BR Sectors livery.

Built for British Rail between 1976 and 1984, the first batch of 30 locomotives were built by Electroputere in Romania as a replacement to ageing fleets of first generation locomotives such as the Class 37 and Class 47. A further 105 locomotives were subsequently built by BREL at Doncaster and Crewe Works, bringing the total fleet of Class 56s to enter service to 135.

Its bodyshell design was based on the Class 47 and the Class were the first BR diesel type to be built with air train brakes only. Its 3,250 horsepower output enabled a top speed of 80mph (129 km/h), and the 'Grids' plied its trade across the British railway network at the head of heavy freight services.

Following privatisation of the rail network in 1996, many models passed to private owners. However, maintenance needs were high by modern standards, and notwithstanding significant investment by private operators, the class could not compete with more modern Class 66 in terms of availability or maintenance costs.

Most locomotives were withdrawn by EWS on 31 March 2004, although some were reinstated for use on construction trains connected with the LGV East in France; others were put into service for private operators such as Fastline and Colas Rail, and remain in service today.

The BR Sectors Class 56 for Train Simulator is a former Iron Horse House model, which has been updated to Train Simulator standard, including new scenarios and improved exterior modelling. Features include cab and instrument lighting, two-tone horn, driver vigilance device, engine shut down/start up procedure and slow speed control.

The locomotive is also Quick Drive compatible, giving you the freedom to drive the BR Sectors Class 56 on any Quick Drive enabled route for Train Simulator, such as those available through Steam. Also included are scenarios specifically for the West Coast Main Line North route (available separately and required to play these scenarios).

Scenarios

Four scenarios for the West Coast Main Line North route:

- Training: Class 56 Simple Controls
- Training: Class 56 Expert Controls
- Heavy Going
- Ready for Repair

More scenarios are available on Steam Workshop online and in-game. Train Simulator's Steam Workshop scenarios are free and easy to download, adding many more hours of exciting gameplay. With scenarios being added daily, why don't you check it out now!

Carlisle

106

With only 11 in mainline use today, this is a nice addition for the game. As usual, the sounds are bad but it comes with wagons and a nice older livery. There is an AP sound pack on the way for it so it all looks good for the class 56. Overall, I enjoy using this train.. This is a really grunty loco with interesting extra features.
